Analysis of the Venezuelan foreign ***exchange market.***

Evolution of the parallel market

At the close of July 2022, the parallel exchange rate closed at VES 5.76/USD, averaging VES 5.69/USD during the month, an increase of 4.8% over the close of the previous month and of 47.9% compared to the same period of 2021. For its part, the corporate[1] exchange rate closed on the same date at VES 6.12/USD, with a monthly average of VES 6.03/USD, and an average premium of 5.8% over the FX retail rate.

In July, the parallel exchange rate presented a behavior like that observed in the previous month, increasing at a moderate rate like that observed between January and April of this year. Even so, the consecutive depreciations of the exchange rate seem to show that the indicator will maintain an upward trend until the end of the year, after it seemed to show a certain level of stability around VES 4.5/USD at the beginning of the year. This even though the Central Bank's interventions on the market have remained above what was observed during the previous year, indicating that macroeconomic imbalances acquire greater weight in the formation of the price of foreign currency in Venezuela than the decisions taken to contain them.

The Official exchange rate and BCV interventions

The official exchange rate closed the previous month at VES 5.78/USD, with an average during July of VES 5.67/USD. Thus, the price agreed in the unofficial market remained, on average, 0.5% above the official marker in July 2022, 2.1 percentage points (pp.) lower than the margin observed in 2021 - marking in that year a premium of 2.6% of the parallel exchange rate over the official one.

The close relationship between the unofficial and official marker is mainly due to the BCV's foreign currency sales to the financial system. In July, the BCV intervened in the foreign exchange market with USD 158.3 million, 579.0% higher than the sales of the same month of 2021, but 38.0% lower than the amounts of June.

Exchange market volatility.

The volatility[2] of the parallel exchange rate raised in July, increasing 0.1 pp. with respect to the previous month. On the other hand, the volatility of the official rate in July remained lower than that of the parallel rate, being 1.3 pp. below the latter.

Parallel exchange rate ***projections.***

Fundamentals of projections:

Given the technical difficulties in making nominal exchange rate projections in an environment of high inflation, as mentioned in previous reports, Ecoanalítica is currently making adjustments to our predictive model. The results shown in this edition are the result of this adjustment process. Therefore, they present relatively significant changes with respect to the previous edition.
